

AFRICAN LAND

VALET PARKING SERVICES PROPOSAL FOR STANDARD CHARTERED BANK NIGERIA

Lagos · Abuja · Port Harcourt — National Branch Network Survey

Prepared by African Land | March 2026

1. Executive Summary

Following a physical survey of five key national branches, this proposal presents staffing structures, operational findings, monthly cost schedules, and external overflow parking arrangements designed to enhance the Standard Chartered customer experience through seamless vehicle management.

5 Branches Surveyed Nationally	15 Staff Proposed Daily Deployment	₦7.250M Total Monthly Cost (National)
--	--	---

- Site surveys completed at Head Office, Ajoye Adeogun, Ikeja, Abuja Wuse II and Port Harcourt branches
- Walkie-talkie communication system recommended for all sites
- External overflow parking solutions identified and assessed at all branches
- Dressing code and branding standards proposed for all personnel

2. Scope of Service

The following services will be delivered by our valet team at every branch:

Service	Description
Customer Greeting	Professional valet staff receive and greet customers on arrival at each branch entrance.
Vehicle Parking & Retrieval	Safe, prompt parking and retrieval of customer vehicles including overflow management.
Walkie-Talkie Communications	Real-time communication between stationed drivers and supervisors for fast vehicle retrieval.
Overflow Coordination	Management of auxiliary parking at all identified external overflow locations.
On-Site Supervision	Supervisor manages daily operations, quality control, and customer interactions.
Traffic Management	Active management of vehicle flow during peak banking hours to minimise congestion.

3. Branch-by-Branch Proposals

3.1 Head Office Branch

Site Assessment

A physical survey of the Head Office branch was conducted with the assistance of Mr Emmanuel (08062188204). Parking challenges were identified immediately upon arrival. Access to the internal parking structure was granted — Level P05 was identified as a viable overflow facility to accommodate additional client vehicles when external parking slots are full.

A valet driver will be permanently stationed at Level P05, retrieving vehicles via walkie-talkie upon customer departure from the banking hall.

Optimal full deployment: 3 Drivers + 1 Supervisor. Recommended trial phase: 2 Drivers + 1 Supervisor.

External Car Parking — Overflow Provision

P05 Internal Overflow — Head Office

We propose the formal utilisation of Level P05 as the designated overflow parking facility for the Head Office branch. A dedicated valet driver will be stationed at this level at all times during operational hours to manage inbound vehicles when external street-level slots reach capacity. A structured review of this arrangement will be conducted after the first three (3) months of operations to assess capacity adequacy, operational effectiveness, and the need for any adjustment to staffing or procedures at this location.

Proposed Staffing (Trial Phase)

Description	Unit Rate (NGN)	Monthly Total (NGN)
Valet Driver × 2	₦450,000 / head	₦900,000
Supervisor × 1	₦550,000	₦550,000
Sub-Total		₦1,450,000

3.2 Ajose Adeogun Branch

Site Assessment

Staff vehicles are currently directed to park at an alternate location away from the main bank building. The branch has 13 designated on-site parking slots. An informal arrangement with the adjacent Zenith Bank guards provides access to an estimated 10 additional spaces, giving a combined capacity of 23 spaces, subject to confirmation.

External Car Parking — Overflow Provision

Zenith Bank Adjacent Space — Mutual Understanding Basis

Following a review of the immediate vicinity, we are aware that staff already utilise a space a block away due to the nature of activities there — primarily active during night hours only — which makes it well suited for daytime overflow use. We propose managing operations in conjunction

with the adjacent Zenith Bank parking area. Whilst Zenith Bank has not been open to any formal discussions on this matter, there exists a mutual understanding at the operational level that allows for utilisation of the space. We will ensure proper vehicle management and security within this arrangement to protect all parties and their customers. This will be reviewed regularly and a formal arrangement pursued at the earliest opportunity and open for review. With this situation, we propose to add a supervisor on site making a total of 3 professional personnel to improve the initial proposal of just 2 valet drivers.

Proposed Staffing

Description	Unit Rate (NGN)	Monthly Total (NGN)
Valet Driver × 2	₦450,000 / head	₦900,000
Supervisor × 1	₦550,000	₦550,000
Sub-Total		₦1,450,000

3.3 Ikeja Branch

Site Assessment

The Ikeja branch is located in a high-traffic corridor. Current parking capacity falls short during both medium and peak hours, creating significant difficulty for customers. Branch security regularly directs vehicles to the adjacent D Podium Mall as an overflow area during busy periods.

External Car Parking — Overflow Provision

D Podium Mall — Current Status

During our inspection of the Ikeja branch, we identified D Podium Mall as the primary overflow option, currently being used by both clients and branch security personnel. We formally approached the mall management to establish an official arrangement; however, they have declined to formalise the arrangement at this stage. This presents two options: (1) continue utilising the mall on the existing informal basis as it is presently working in practice, or (2) continue the search for a formal alternative. Our survey did not identify any suitable alternative within close proximity. Based on operational experience, we recommend continuing with the mall on the current informal basis while we actively explore any emerging alternatives. This will be kept under review.

Proposed Staffing

Description	Unit Rate (NGN)	Monthly Total (NGN)
Valet Driver × 2	₦450,000 / head	₦900,000
Supervisor × 1	₦550,000	₦550,000
Sub-Total		₦1,450,000

3.4 Abuja Branch — Wuse II

Site Assessment

The Abuja Wuse II branch is similarly located in a high-traffic corridor. Current parking capacity falls short during medium and peak hours. Branch security confirmed that the shopping mall one block away is regularly used as an overflow area during busy banking periods.

External Car Parking — Overflow Provision

Mall Overflow + Government-Designated Parking

The overflow situation at Abuja is comparable to Ikeja. The mall located one block away from the branch has indicated it is not willing to enter into a formal agreement; however, it remains open to usage on a space-available basis. Our team will continue to utilise this space accordingly. Additionally, there is a significant advantage at the Abuja branch: there are approved and marked out designated overflow parking spaces in front of and around the branch premises by the government. These publicly designated spaces can be effectively and professionally managed by our valet team, providing a reliable, sanctioned overflow solution that is fully compliant with local regulations. This represents a strong operational foundation for the Abuja branch.

Proposed Staffing

Description	Unit Rate (NGN)	Monthly Total (NGN)
Valet Driver × 2	₦450,000 / head	₦900,000
Supervisor × 1	₦550,000	₦550,000
Sub-Total		₦1,450,000

3.5 Port Harcourt Branch — Trans Amadi

Site Assessment

The Port Harcourt branch, like the other high-traffic locations, experiences parking shortfalls during medium and peak periods. A three-person team — comprising two valet drivers and one supervisor — will be deployed to manage vehicle flow into and around the branch. Average customer dwell time in the branch ranges from 20 to 30 minutes, which creates predictable turnover and manageable retrieval demand.

External Car Parking — Overflow Provision

Existing Arrangements + Vacant Building Adjacent to Branch

We propose managing and optimising the existing parking arrangements currently in use at the Port Harcourt branch as the primary operational foundation. In addition, there is a vacant building located immediately adjacent to the branch premises, which presents a practical and immediately usable overflow option. We propose utilising this space to supplement on-site capacity pending the identification and formalisation of a longer-term concrete alternative. This arrangement will be actively monitored, and any updates regarding the status of the vacant building or alternative overflow solutions will be communicated promptly.

Proposed Staffing

Description	Unit Rate (NGN)	Monthly Total (NGN)
Valet Driver × 2	₦450,000 / head	₦900,000
Supervisor × 1	₦550,000	₦550,000
Sub-Total		₦1,450,000

4. Consolidated Cost Summary — National Network

Branch	Staffing	Monthly Cost (NGN)
Head Office	2 Drivers + 1 Supervisor	₦1,450,000
Ajose Adeogun	2 Drivers + 1 Supervisor	₦1,450,000
Ikeja	2 Drivers + 1 Supervisor	₦1,450,000
Abuja (Wuse II)	2 Drivers + 1 Supervisor	₦1,450,000
Port Harcourt (Trans Amadi)	2 Drivers + 1 Supervisor	₦1,450,000
TOTAL — All 5 Branches	15 Staff	₦7,250,000

5. Personnel Dressing Code & Branding

To ensure a premium, professional appearance consistent with the Standard Chartered Bank brand environment, all valet personnel will be required to adhere to the following uniform and dressing standards:

Uniform Components

- Shirt — branded, professional-grade uniform shirt
- Trouser — smart, well-fitted formal trousers
- Waistcoat — structured waistcoat for a premium valet appearance

Branding

Branding options — including logo placement, colour scheme, and embroidery/printing specifications — remain open for discussion and will be finalised in collaboration with Standard Chartered Bank prior to commencement of service. The uniform design will reflect the professional standards expected at a premium financial institution.

Uniform Cost Schedule

Description	Rate per Set	Total Amount (NGN)
Uniform per Personnel (2 sets each) × 15 Personnel	₦200,000	₦3,000,000

Description	Rate per Set	Total Amount (NGN)
TOTAL UNIFORM COST (One-Off)		₦3,000,000

Note: The figure above is based on 2 sets per personnel × 15 personnel at ₦200,000 per set. This is a one-off provisioning cost and does not form part of the recurring monthly service fee. Branding and specification to be agreed prior to procurement.

6. Risk Mitigation

The following risk register identifies key operational risks associated with the valet parking service, their assessed impact level, and the detailed mitigation strategies that African Land will deploy to manage each risk effectively.

Risk	Impact	Risk Description & Mitigation Strategy
Vehicle Damage Mitigation:	Medium	Physical damage to customer vehicles during parking, manoeuvring, or retrieval. All valet personnel will be trained drivers holding valid licences. A pre-acceptance vehicle inspection process will be implemented — drivers will conduct a documented condition check of every vehicle before taking custody, using a standard checklist with photographic evidence on a mobile device. Comprehensive third-party motor liability insurance will be in place to cover all vehicles under our care. Any damage claim will be handled promptly via the insurer, with full transparency to the customer. We propose and insurance coverage of ₦20,000,000.00 per branch, aggregating to a total national coverage of ₦100,000,000.00. The corresponding annual premium for this coverage is ₦2,500,000.00 annually.
Customer Dissatisfaction Mitigation:	Low	Negative customer experience arising from long wait times, poor staff conduct, or vehicle mishandling. All personnel will undergo structured service excellence training prior to deployment, covering customer greeting protocols, professional communication, and complaint handling. A real-time walkie-talkie communication system will be maintained between all stationed drivers and the supervisor to ensure prompt vehicle retrieval. Customer feedback will be actively collected at each branch through a simple digital or physical form. The site supervisor at each location will have direct accountability for service quality and will report weekly performance data to African Land off-site management which will feed directly to SCB.
Security Breach Mitigation:	Low	Unauthorised access to vehicles, theft of vehicle contents, or impersonation of valet staff. All personnel will undergo thorough background checks and identity verification prior to employment. Every valet team member will be issued with a branded uniform and ID badge that must be visibly worn at all times on duty. Numbered valet tickets will be issued to every customer, with vehicles only released upon presentation and verification of the corresponding ticket. CCTV at overflow parking locations and branch entry points will be utilised where available. Any suspicious activity will be reported immediately to the branch security team and the client. Staff will be briefed on fraud awareness and social engineering risks during induction training.

Risk	Impact	Risk Description & Mitigation Strategy
Operational Delays	Low	Delays in vehicle retrieval due to staffing shortages, system failures, or high simultaneous demand.
Mitigation:		Staffing levels at each branch have been calibrated based on observed and projected peak-hour traffic volumes. In the event of staff absence, African Land maintains a trained relief pool from which replacement personnel can be deployed within the same business day. The walkie-talkie system ensures real-time coordination between drivers across all parking zones, reducing retrieval lag. Standard operating procedures (SOPs) for each branch will be documented and made available to all team members, including contingency protocols for high-demand periods. Performance will be reviewed monthly in the first three months and quarterly thereafter.

7. Next Steps

Upon receipt of Standard Chartered Bank's feedback and approval of this national proposal, the following steps will be initiated:

1. Standard Chartered Bank reviews and approves this national branch network proposal.
2. Service Agreement issued covering terms, liabilities, operational protocols, and branding specifications.
3. Comprehensive invoice issued for all approved branches, including one-off uniform provisioning cost and insurance cover.
4. Formalise and finalise all overflow parking arrangements at respective branches, subject to SCB instruction as per advised scenarios.
5. Uniform procurement and branding finalisation in approval/collaboration with Standard Chartered Bank.
6. Phased deployment commencing with agreed priority branches.

We look forward to your positive consideration of this proposal and are available to discuss any aspect at your earliest convenience.

Yours Faithfully,

Authorised Signatory
